	Urgent	Not Urgent
Important	• Extracts data from https://www.purdue.edu/recwell/facility-usage/ • Stores the data extracted in a database • Display the data using graphs, tables, etc. • Store alternative data/not crash if the website is down/not functioning as intended.	• Display trends about CoRec usage data. • Identify the peak and quiet hours • Add search criteria for each CoRec facility
Not important	• Use java's built-in HttpClient • Use SQLite with JDBC to store occupancy records. • Use JavaFX chart components to create graphs and visualizations.	• Automatic notifications to each user if opted in • Logging in/signing up with usernames and passwords • Social media like Instagram/facebook that post stories about crowd surges etc.
